Inuvik Airport Runway Extension Project

As I mentioned earlier this week, the Inuvik airport runway extension is a very important project for not only my constituency but for the North, Canada and is a strategic location project for all of North America. As mentioned as well earlier this week, the project is delayed and stalled even though there is a time-sensitive part of the construction that needs to occur this year or it will face a delay of another year.

1. Can the Minister update this House on the discussions her department has had with regard to the Inuvik airport runway extension project and if the time-sensitive part of the project will occur this year;
2. Does the Minister expect resolution to the issue that will allow the project to proceed this year and save jobs for the community of Inuvik and surrounding communities;
3. Can the Minister commit to ensuring this project will not suffer unnecessary delays moving forward; and
4. Can the Minister ensure this House that on-going communications will occur to ensure a timely resolution is found to the design estimate overrun for the Inuvik airport project?
